Assignment 1 - Hello World

Create a bash notebook using Jupyter and explore the commands you have learned so far.

Objective: Ensure you have a working environment, and begin to explore working with the command line shell and with Jupyter notebooks. Find any issues with installation and resolve them.

Steps required:

- Install the course VM
- Open up the VM as described
- Open up a terminal, and start jupyter with `jupyter notebook`
- In the jupyter window, start a new Bash notebook
- `echo "hello world"` and execute
- Try out some other commands to get a feel for the shell and navigating the notebook environment (e.g. try Help -> UI Tour, and Help -> Keyboard Shortcuts)
- Give the notebook a clear name like "`assignment-01-chudnov`"
- Acknowledge any assistance you received
- Download as PDF, and download as .ipynb as well
- Zip together: `zip assignment-01-chudnov.zip assignment-01-chudnov.*`
- Upload your zipfile to blackboard by the deadline

Deadline: Tuesday, September 8, 7pm (before class begins)
